Abstract

Global entrepreneurship is currently on the front pages of business, consumer and educational publications in many languages. It is increasingly featured on the agendas of conferences worldwide. Yes, it is a major topic, no doubt. But examined more closely, what really is *it* all about? How significant is its present vogue – its real influence on economic trends? This paper is intended to explore some elements of its economic, cultural and psychological past, future, and its dynamics. We will look at the economic climates that drive – or impair – entrepreneurship development.
